

“I have been working with the FleetIQ360 technology on sit-down, LP-powered forklifts from Collective Intelligence Group for approximately nine months. Throughout this time, I have had positive experiences with both the product and the support team. The FleetIQ360 system allows me to monitor pre-use inspections, assign personnel to specific lifts, track impacts, restrict forklift access for maintenance, and manage operator licenses, among other useful functions. With this system, I have confidence that only authorized operators can access equipment, and I receive timely notifications and reports when issues arise.

The support team for FleetIQ360 has been exceptional. Initially, I was concerned about managing a new forklift fleet with advanced technology, but the team made the transition seamless. They helped me set up the user-friendly FleetIQ360 dashboard, which has made navigation, report generation, and user/equipment management straightforward. Whenever I encounter an issue, I know I can rely on the Collective Intelligence Group for prompt resolution. Overall, my experience with FleetIQ360 has been outstanding, and I highly recommend it to anyone looking to efficiently manage their industrial equipment.”
